

Off-Grid Agent: Complete Command Reference

1. Weather & Environmental Data

Current Weather

Syntax: `!weather <location>`

Example: `!weather Seattle`

Description: Fetches current atmospheric conditions and a 12-hour forecast summary from the nearest observation station.

Output: *Text-based report: "Forecast for Seattle: Now 45F, Cloudy. Summary: Rain expected at 9pm."*

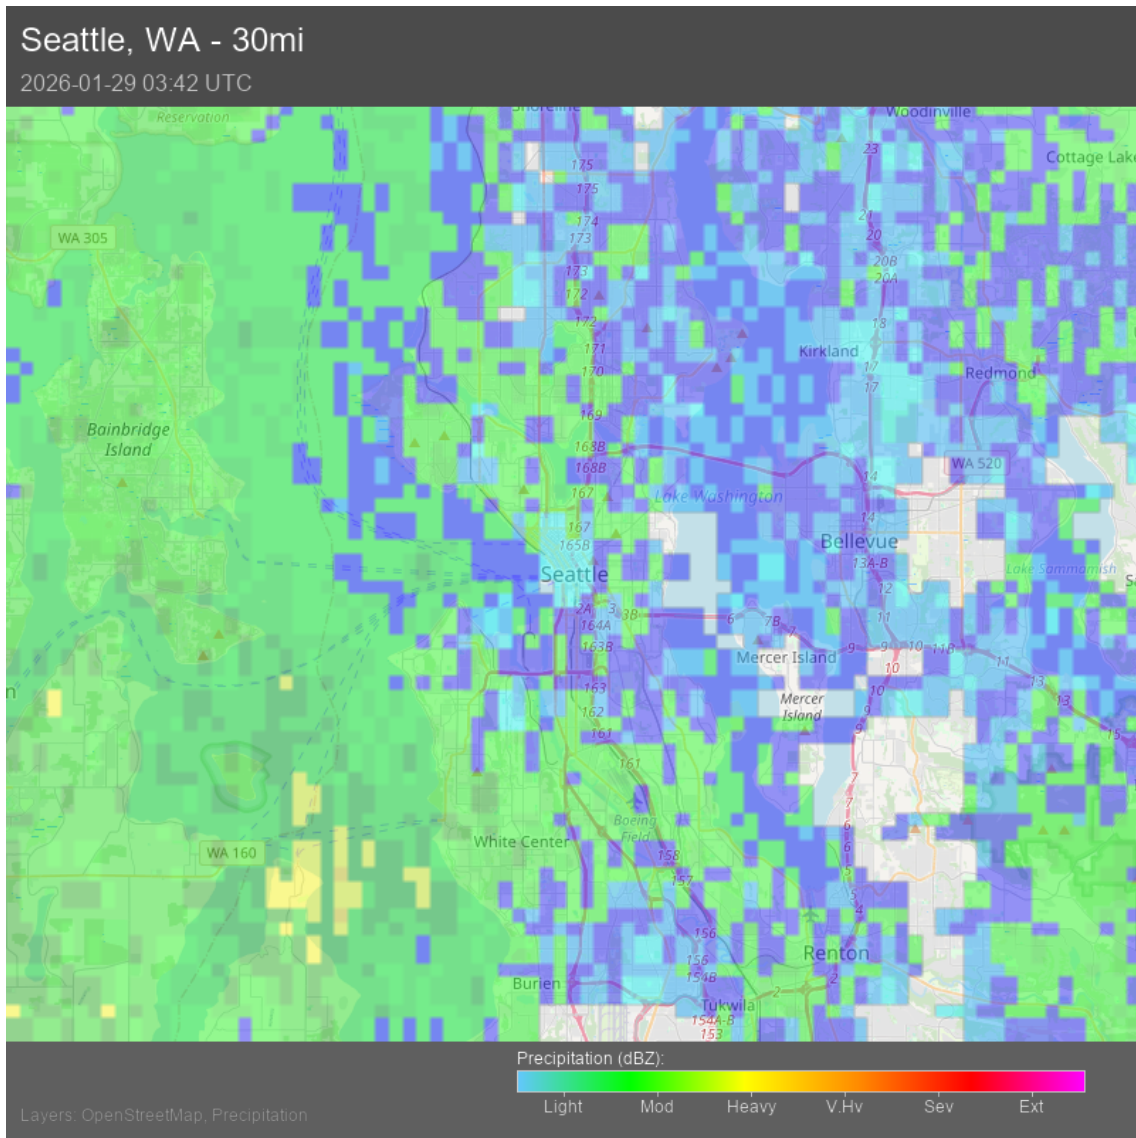

Interactive Radar (Static)

Syntax: `!radar <location> <miles>`

Example: `!radar Seattle 30`

Description: Generates a high-quality NEXRAD radar overlay with 60% transparency and smoothing. Includes UI legend and timestamps.

Off-Grid Agent: Complete Command Reference

Output: Visual map delivered via MMS and Cloud Link.

Animated Radar (30m & 60m Loops)

Syntax: `!radar <location> <miles> gif [60]`

Example: `!radar Seattle 30 gif 60`

Description: Generates an animated loop of weather data. Supports 30-minute (default) or 60-minute loops at 5-minute intervals.

Output: Animated GIF showing rain movement and intensity trends.

Hourly Forecast

Syntax: `!forecast<hours> <location>`

Example: `!forecast24 Seattle`

Description: Provides a detailed hour-by-hour breakdown of temperature, wind, and conditions for up to 72 hours.

Output: A prioritized list of upcoming weather states.

Off-Grid Agent: Complete Command Reference

2. Specialized Utilities

Recipe Extraction

Syntax: `!recipe <url>`

Example: `!recipe https://youtube.com/watch?v=...`

Description: Uses Vision-Language AI to transcribe cooking videos into structured recipes.

Output: *SMS: "Ingredients: ..., Steps: ..."*

System Check

Syntax: `!check`

Example: `!check`

Description: Runs diagnostic tests on Gmail, Hardware, and AI Backends.

Output: *Status Report with [OK] or [ERR] indicators.*

3. Agent Management

Clear History

Syntax: `!clear`

Example: `!clear`

Description: Resets the personal AI conversation memory for the user.

Output: *Success confirmation message.*

Help / Info

Syntax: `!info`

Example: `!info`

Description: Displays the internal command list as configured.

Output: *Structured trigger word list.*
